Product PRD: Aangan

Product: Aangan: the courtyard that watches over you

Goal: A hardware company for a 2040 where AI is abundant and trust is not

Read: 8 minutes

Author: Godhuli Vyas, 4 August 2026

Aangan's Overview

Aangan

Aangan is a **hardware company for India's elderly.** Three physical products, the **Hub, Band and Sense**, plus a **Family Circle app**, give an elder a companion that works without a smartphone and without the internet, and give their children a safety net that does not depend on a daily phone call.

Hub | Band | Sense | Family Circle app | Scam Shield | Offline-first

Key Insights:

Scam Shield blocks any voice asking for money or an OTP until a family member confirms it, with no urgency override.

Offline-first: SOS, fall alert and reminders work through an on-device model, down to 2G and SMS.

Sequenced like a real company: a 500-household pilot in one metro over six months.

Why now

22,495

Rs crore lost to digital arrest scams in 2025

Estimate, news coverage

347M

Indians aged 60+ by 2050, up from 149M in 2022

UNFPA India, 2023

4.3M

professional caregiver shortfall

NCAER, 2025

20%

of urban elderly live alone (10% rural)

NSO, 2021

Everyone who will be elderly in India in 2040 is already alive today.

Why the obvious assumptions fail

1

A good app is enough

Trust and literacy barriers do not move with UX polish. Emoha and Khyaal still route through human call-centre agents.

2

Better networks fix access

A fall does not wait for a tower to come back up. A scam call is as dangerous on great bandwidth as on poor.

3

Families will watch a dashboard

Adult children are busy and carry guilt. The system must push the two or three things that matter, not ask them to pull.

4

Fraud cover is a bonus

It is core safety infrastructure today, not a 2040 problem.

Who it is for

K

Kamla Devi, 68, Lucknow

The primary user

Widowed, lives alone in the family home her son left for Bengaluru in 2019. **Owns a smartphone she rarely unlocks.** Had a second fall last year and **told no one.** Wants dignity and company, not to be treated as a problem to manage.

R

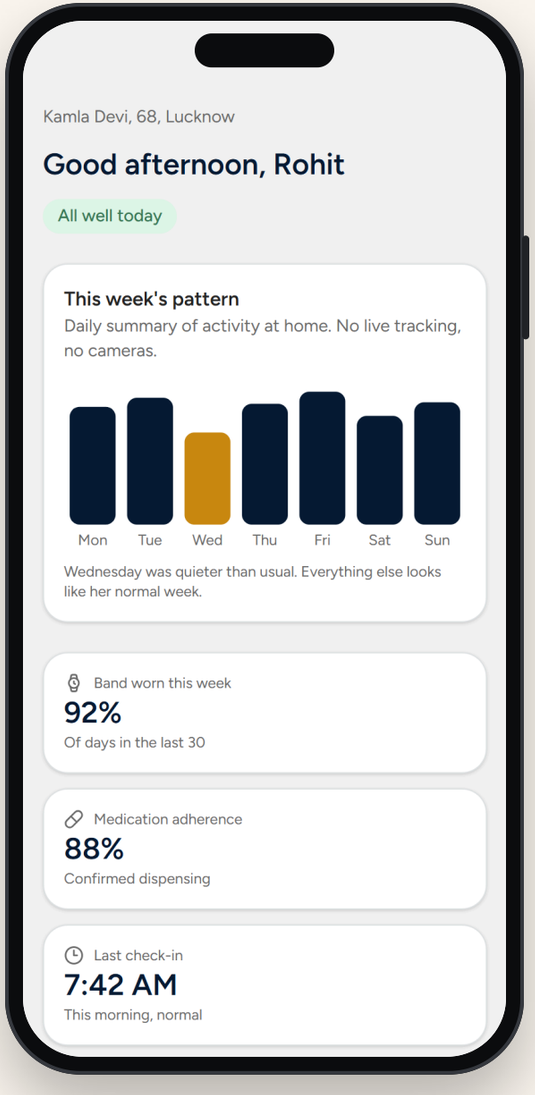

Rohit, 34, Bengaluru

The primary buyer

Product manager who pays his mother's bills and a cook, and calls twice a week. **Quietly afraid of the 3am call he cannot get to in time.** Will pay a real subscription for **verified peace of mind,** not a wellness gimmick.

Prototype: home and weekly report

Aangan

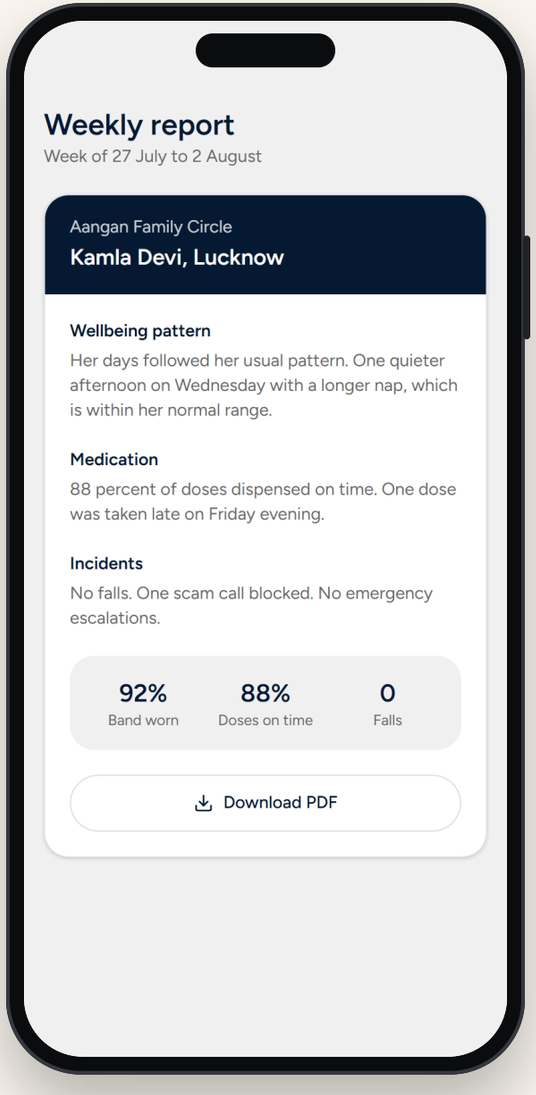

Rohit's home

"All well today" with a weekly pattern, **no live tracking and no cameras.** Wednesday is amber: quieter than usual.

Band worn **92%**, medication adherence **88%**, last check-in **7:42 AM**, with **Call Mom** one tap away.

The weekly report reads **"No falls. One scam call blocked."** and can be downloaded as a PDF.

Solution: Push the two or three things that matter: a weekly digest, not a live feed.

Weekly report

Product scope for v1

In

In scope

- Fall detection and offline SOS through the Hub and Band
- Scam Shield voice verification for any money or OTP request
- Medication and routine reminders tied to physical confirmation
- Family Circle weekly pattern dashboard and one-tap escalation

Out

Out of scope

- Robotic mobility or physical assistance such as lifting or bathing
- Clinical diagnostic claims needing CDSCO Class-C/D certification
- Generic smart-speaker features like music or shopping

Functional requirements: highlights

Aangan

Area	Requirement	Priority
Safety	SOS, fall alert and reminders work fully offline through the on-device model	P0
Safety	Fall alert escalates in 3 steps: check-in, family alert, emergency dispatch, each with a configurable window	P0
Fraud	Scam Shield blocks any money or OTP request until a family passphrase or app confirmation, with no urgency override	P0
Companionship	Code-mixed conversation across at least 6 Indian languages at launch	P0
Privacy	Sensor processing on-device by default; camera only as a separate consented add-on	P0

How the system connects

01
Band + Sense
Fall impact and motion signals. The Band has its own cellular SOS.

→

02
Hub (edge)
On-device 1 to 3B parameter model, local mesh over BLE or Thread, eSIM fallback.

→

03
Rule layer
Deterministic safety orchestrator. AI can inform it, never override it.

→

04
Scam Shield
Voice and intent checks. Flags never release a block by themselves.

→

05
Family Circle
Same alert feed for every member; one primary contact sets the rules.

→

06
Cloud
Richer conversation, trend analysis, central Scam Shield updates.

The agents that can talk are not the agents that are allowed to act.

Business model and go-to-market

Aangan

Rs

Model

- Hardware: one-time Hub, Band and Sense bundle
- Subscription: Rs 499/month entry tier
- B2B2C: corporate benefits, hospitals, insurers, RWAs
- Government and CSR distribution

0

Phase 0 pilot

- Months 0 to 6
- 500 households in one metro
- Direct plus diaspora and RWA partnerships

>

Then

- Months 6 to 18: 5 to 6 metros, D2C, corporate, hospitals
- Months 18 to 36: vernacular expansion, insurer bundling
- Months 36 to 60: PPP and CSR rollout

Success metrics

NORTH STAR METRIC

Interventions That Mattered, per household per month

A fall caught, a scam blocked, a missed medication caught. Chosen over daily active use because fewer bad outcomes is the goal, not more usage.

MVP CRITERIA

90%+ of falls detected within 30 seconds. Emergency response under 5 minutes. At least 70% of families still subscribed after 90 days.

SUPPORTING + EXPERIMENTS

Band days worn, Scam Shield false positives, median alert-to-acknowledge time. Tests: 3-minute check-in window, Scam Shield sensitivity, Rs 499 vs Rs 799 tier, guided vs self-serve setup.

Risks and how the PRD answers them

Aangan

1

Elder resistance

Non-screen, culturally warm design, no camera by default, co-designed with senior citizen associations.

2

Capital intensity

PLI incentives, a capital-light pilot and B2B2C channels to front-load cash flow.

3

Medical-device creep

v1 stays wellness and safety only; CDSCO engaged early on any vitals roadmap.

4

Privacy backlash

DPDP-compliant, camera opt-in, fully auditable family-visible data trail. Data is never sold.

Thank you for reading.
