System Documentation: CupShup

Type: Internal production system, CupShup

Goal: A WhatsApp agent that never loses a lead’s context

Read: 4 minutes

Author: Godhuli Vyas

Enquiry-to-CRM Agent: overview

CupShup

A WhatsApp enquiry comes in, and AI **reads it, qualifies it and routes it**. No human touches it. n8n orchestrates the Meta WhatsApp Business API, Brevo and Supabase as one loop.

n8n | WhatsApp Business API | Brevo | Supabase | UTM attribution

Key Insights:

Zero human touch from enquiry to routed lead.

4 systems, 1 loop: messaging, orchestration, email and database act as one.

Every lead keeps its **UTM source**, so the origin of a closed deal is recoverable.

The loop: enquiry to CRM

CupShup

01
Enquiry arrives
A message lands on WhatsApp through the Meta Business API.

→

02
n8n orchestrates
The workflow picks it up and calls the AI.

→

03
AI qualifies
It reads the message and decides where the lead goes.

→

04
Brevo and Supabase
The lead is routed; its state and source are stored.

The same loop handles the next message in the thread, using the stored state.

Four systems, one loop

CupShup

W

WhatsApp Business API

Meta. Where the enquiry arrives.

n8n

n8n

The orchestrator that connects every step.

B

Brevo

The email and contact side of the CRM.

S

Supabase

The database that holds the lead and its state.

The hard part was state

CupShup

!

The problem

A thread that pauses for **three days** has to resume in context. **Otherwise the reply opens a new lead.**

=

The fix

The thread is resumed in context rather than opening a new lead, so the returning message continues the **same lead**.

CupShup

At a glance

4

APIs in a single loop

0

Human touches from enquiry to routing

3 days

A paused thread still resumes in context

As stated in the project record.

What is tracked

CupShup

Item	Where it lives	Why it matters
Enquiry message	WhatsApp Business API	The starting point of every lead.
Qualification and route	n8n and AI	Decides where the lead goes without a human.
Thread context	The loop	Lets a thread resume after a pause.
UTM attribution	Carried through the loop	The source of every closed deal is recoverable.

Proposed success metrics

CupShup

NORTH STAR METRIC

Enquiries routed correctly with no human touch (Proposed)

Proposed: the agent is only useful if routing is right and context holds.

L1 METRIC (PROPOSED)

Share of resumed threads that stay on the original lead.

L2 METRIC (PROPOSED)

Closed deals with a recoverable UTM source.
