Product Teardown: ethOS

Device: Web and mobile browser

Goal: Cut the noise out of internship hunting for students and freshers

Read: 5 minutes

Author: Godhuli Vyas, shipped solo

ethOS's Overview

ethOS is a curated internship discovery engine for **students, freshers and early-career** applicants. It sits in front of the usual job-board noise (staffing agencies, dead postings, roles asking a fresher for 3+ years) and keeps only genuine startup opportunities.

OAuth 2.0 · LangChain · GPT-4o · Pinecone · FastAPI · PostgreSQL · Next.js

Key Insights:

Zero agency spam by design: the feed is startup-only, companies under 200 staff, refreshed daily.

Every listing gets a **0 to 100 quality score** from funding stage, paid vs unpaid, remote flexibility, fresher-friendliness and recruiter activity.

An **AI Standout Toolkit** adds a portfolio-project blueprint and resume keywords to each listing.

Who it is for

2

2nd-year student

Entry

Looking for a first internship and does not know where to start. Job boards bury the few useful roles under senior postings and agency ads, so most of the time goes to **scrolling, not applying.**

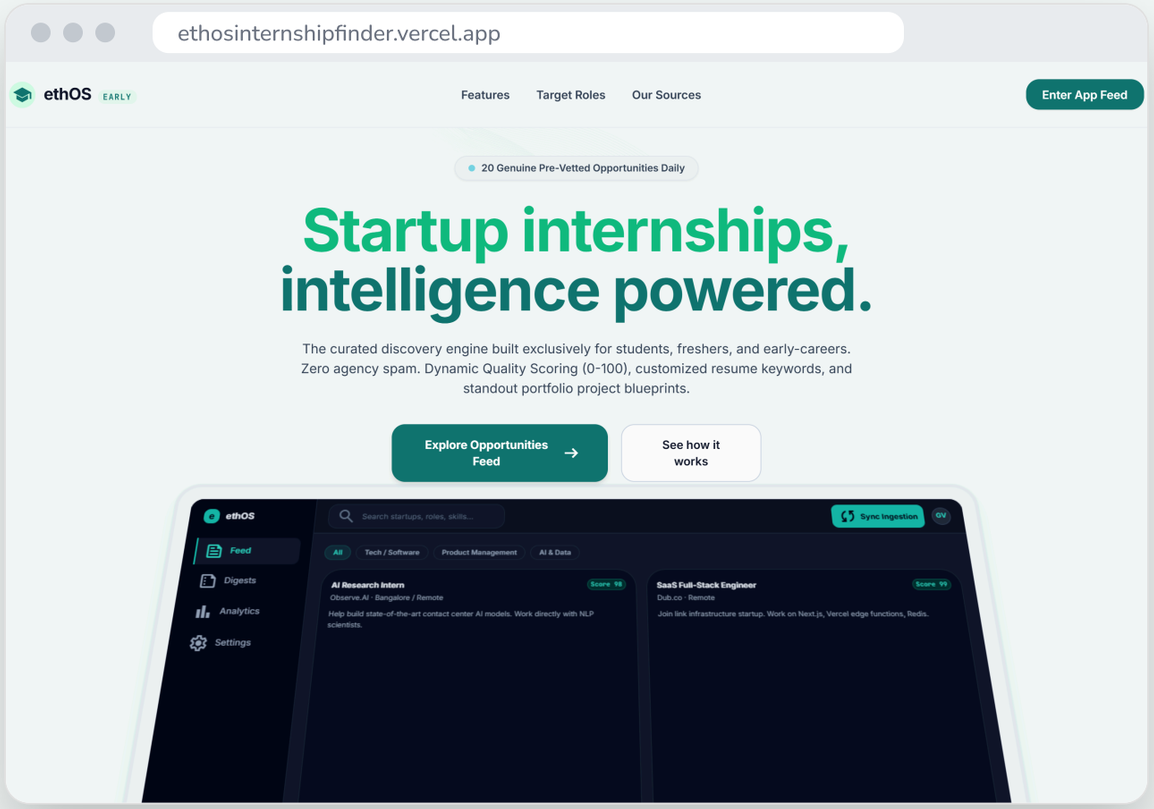

F

Final-year fresher

Placement

Needs a full-time start. Every board shows the same roles, many asking for years of experience. Wants a short list worth applying to and a **resume that matches the listing.**

User Journey: the front door

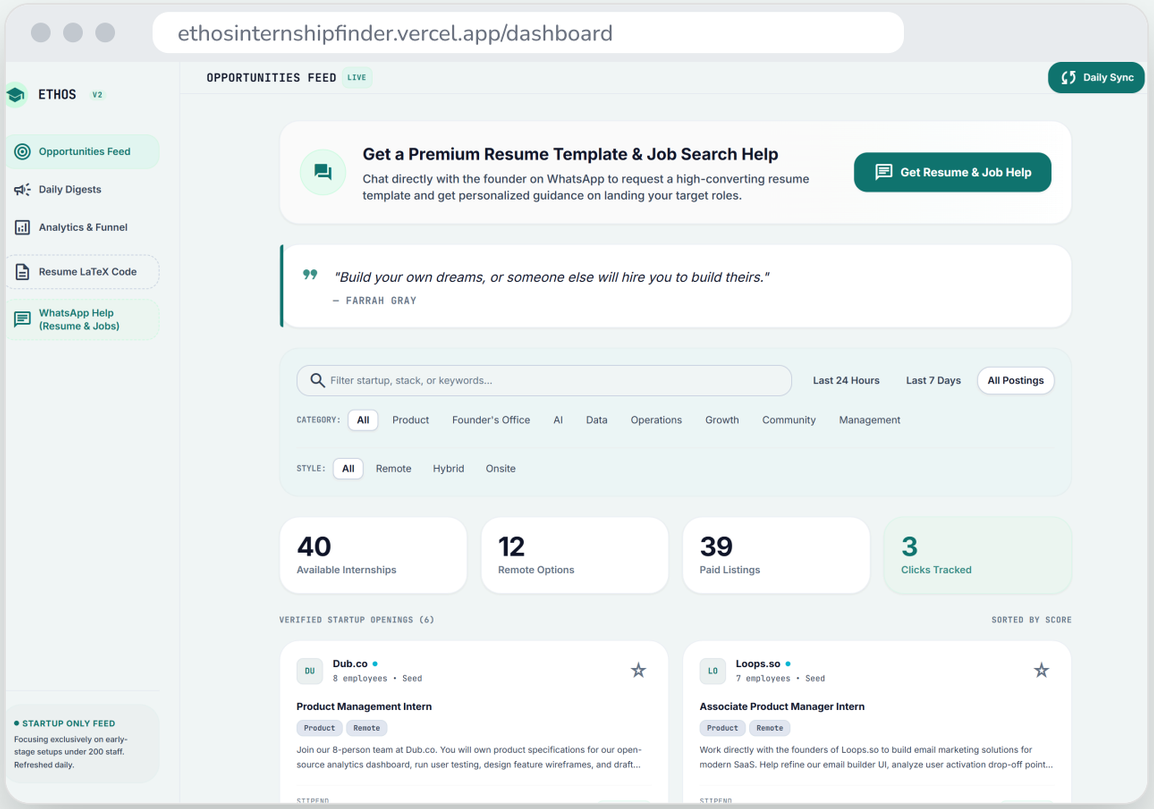

The homepage states the thesis straight away: **"Startup internships, intelligence powered"** and **"20 Genuine Pre-Vetted Opportunities Daily".** A student knows in one line what this is not.

The promise is specific: **zero agency spam, dynamic quality scoring (0 to 100), custom resume keywords and portfolio project blueprints.**

The product preview shows scored cards (Score 98, Score 99) before any sign-up. **But a first-time visitor still has to click through to see the real feed.**

Solution: Keep the proof above the fold: scored listings in the hero so the value is visible without a click.

User Journey: the opportunities feed

Filters match how students actually search: **category** (Product, Founder's Office, AI, Data, Operations, Growth, Community, Management), **style** (remote, hybrid, onsite) and **recency** (24 hours, 7 days, all).

A live counter row (**40 internships, 12 remote, 39 paid**) tells the user how big the pool is before they scroll.

Cards show the company, headcount and funding stage ("8 employees, Seed") so a student can judge the startup at a glance, and the feed is **sorted by score.**

Solution: Every filter and count is built on the same score, so the top of the feed is always the best fit, not the newest post.

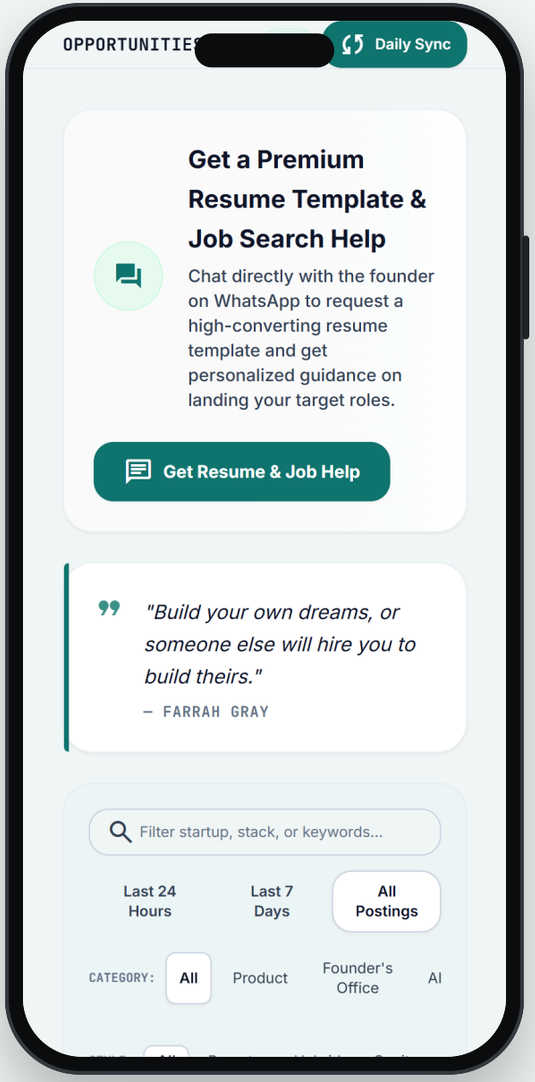

User Journey: on mobile

Students search on their phones, so the dashboard reflows to one column with the same filters.

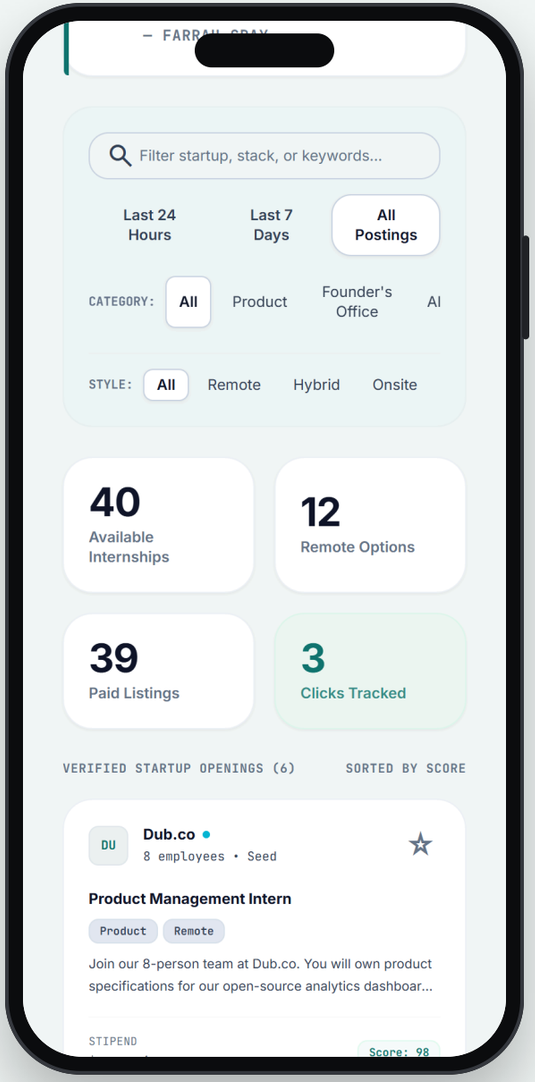

A **WhatsApp help line** ("Get Resume & Job Help") puts a real person, the founder, behind the automation.

The human channel is what turns a cold feed into a **retention loop:** resume help brings the same student back.

Solution: Keep AI for ranking and enrichment; keep a human for trust and the last mile.

Help and filters

Scored listings

How it works

01
Ingest
Pulls listings from OAuth 2.0 sources.

→

02
Orchestrate
LangChain routes each listing through the checks.

→

03
Verify
Drops agencies, duplicates and stale posts.

→

04
Score
0 to 100 on funding, pay, remote and fresher-friendliness.

→

05
Enrich
GPT-4o adds resume keywords and a project blueprint.

→

06
Segment
Cut by milestone, not seniority.

Retrieval is grounded: Pinecone-backed vector search means an answer always points back to a real listing. Served through FastAPI and PostgreSQL, with a Next.js front end on Vercel.

Core advantages

✓

100% pre-vetted feed

No staffing agencies, no generic aggregators, no roles needing 3+ years. Only genuine startup opportunities.

✦

AI standout toolkit

Each listing gets a tailored portfolio-project blueprint, resume keyword modifiers and ATS targets.

100

Quality scoring

Funding stage, paid vs unpaid, remote flexibility, fresher-friendliness and active recruiter signal.

One feed, cut by milestone

Segment	Stage	Why it is separate
2nd year internships	Entry	First-time applicants need low-barrier roles, not senior postings.
3rd year internships	Building	Students building proof of work look for roles that reward projects.
Final year / freshers	Placement	Closer to full-time, so listings lean to conversion and fresher-friendly roles.
High-growth startups	Reach	A stretch tier for students aiming at fast-moving, early-stage teams.

Proposed success metrics

NORTH STAR METRIC

Applications started from the feed, per active student, per week

Shows whether the feed turns browsing into action, which is the whole point of filtering the noise.

L1 METRIC

Share of top-scored listings (80+) that get a click through to apply.

L2 METRIC

Students who return in 7 days, and WhatsApp resume-help requests per 100 active students.
