Five-Agent Content Harness: overview

CupShup

One AI writing everything gave **generic, error-prone content**. Splitting the job across five specialised AI agents fixed that. It runs the AI-SEO content pipeline for CupShup's content team.

Claude | Ahrefs API | LLM-as-a-Judge | Weighted rubric | Orchestrator routing

Key Insights:

Five agents, each with one job: Scout, Copywriter, Optimizer, Illustrator, Critic.

A **quality loop** rejects weak drafts with the specific error, not a blind retry.

A **Single Source of Truth** for brand parameters removes factual discrepancies.

The five agents

CupShup

01
Scout
Queries the Ahrefs API for real keyword volume and search intent.

→

02
Copywriter
Drafts against that brief plus the brand voice corpus.

→

03
Optimizer
Inserts H-tags, meta descriptions and internal links.

→

04
Illustrator
Generates visual prompts for DALL-E and Napkin AI.

→

05
Critic
Grades the final copy against a factual positioning rubric.

The Orchestrator routes work between the agents.

The quality loop

CupShup

01

Critic scores

The draft is graded as a percentage against the rubric.

→

02

Below 75%

The Orchestrator rejects it.

→

03

Back to Copywriter

It returns with the **specific error**, not a blind retry.

→

04

75% or above

The draft moves on to human review.

Humans only see drafts that have already passed the Critic.

Single Source of Truth

CupShup

?

The problem

Conflicting facts across drafts, such as differing city counts.

MD

The fix

One markdown index of brand parameters.

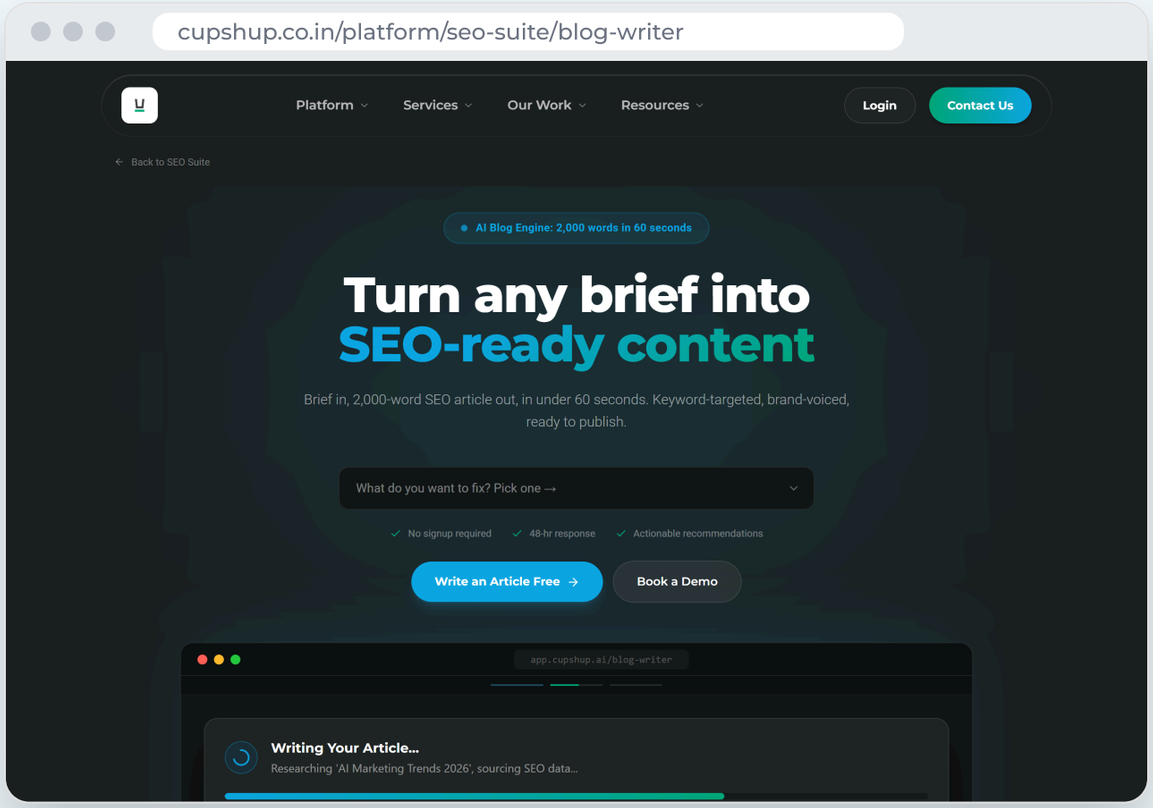

OK

The result

Factual discrepancies were eliminated **before** the Critic ever had to catch them.

The output on the live site

CupShup

The blog engine page on cupshup.co.in promises **2,000 words in 60 seconds**.

The tagline is **"Turn any brief into SEO-ready content"**: keyword-targeted, brand-voiced, ready to publish.

The page is the public face of CupShup's content work; the five-agent loop is the internal pipeline described in this deck.

Solution: Product page above, quality loop underneath.

CupShup

Results

90%

Faster production cycle

6 hours to 45 minutes of human review

8%

Draft rejection rate

75%

Critic pass threshold

As stated in the project record.

Proposed success metrics

CupShup

NORTH STAR METRIC

Drafts approved by a human on first review (Proposed)

Proposed: ties the 8% rejection rate to one trackable number.

L1 METRIC (PROPOSED)

Average Critic score at first submission.

L2 METRIC (PROPOSED)

Factual errors found in human review per article.
