PRD: Produscope AI

Product: Multi-agent financial planning

Data access: Manual entry only, zero bank link

Presented: IIT Guwahati, PM Fellowship

Author: Godhuli Vyas

Produscope AI's Overview

Produscope AI

"Can I afford this?" is really **four questions stacked:** what do I save, what do I already spend, what would this cost me, and what does it delay. One long prompt handles that badly. Produscope splits it across **five narrow specialist agents** and a coordinator, and never asks for bank or UPI access.

Multi-agent | Manual entry | Privacy-first | Lovable

Key Insights:

Built for India's first earners, turning a first salary into a clear plan.

Five advisors: Cost-of-Living, Projection, Affordability, Goal Coach, Life Events.

Privacy is the product: no bank linking, no UPI, you stay in control.

Who it is for

F

First-salary earner

Core user

Just started earning and wants to know **where the money is going** before it is spent, without handing over bank access to get a plan.

G

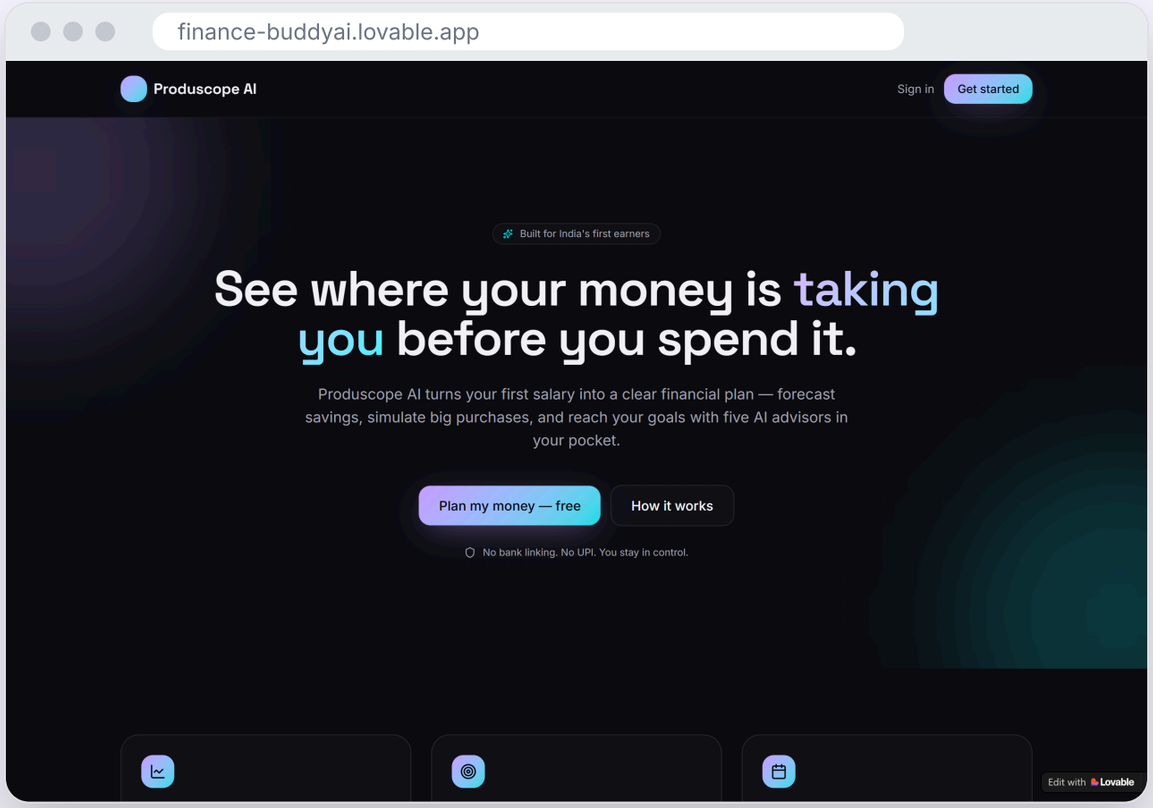

Goal-driven saver

Planner

Saving for a laptop, travel, an emergency fund, a wedding or a Goa trip, and wants an **honest ETA** based on real numbers.

User Journey: the landing screen

Produscope AI

The headline leads with the outcome: **"See where your money is taking you before you spend it."**

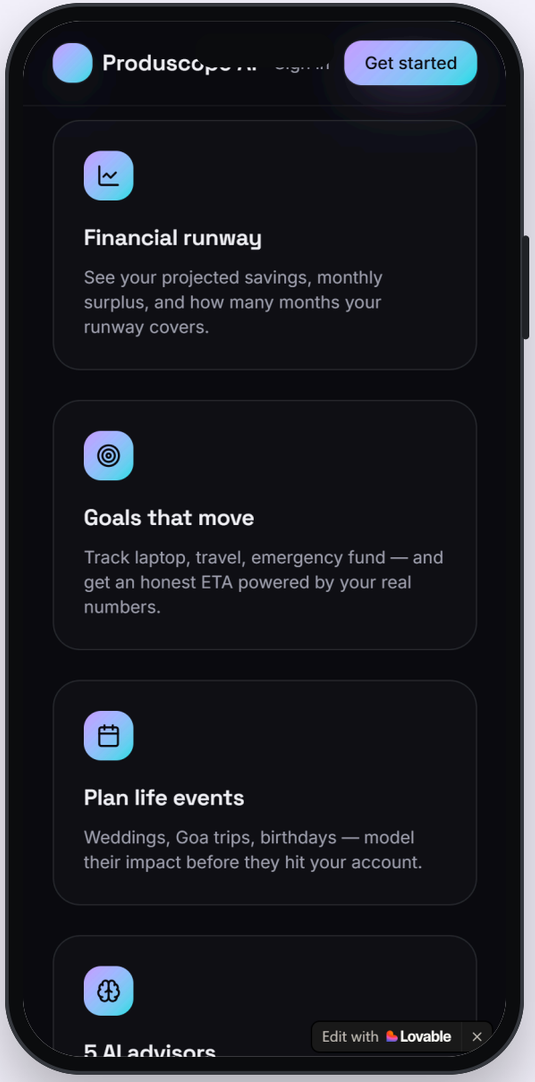

The constraint comes before the feature: **"No bank linking. No UPI. You stay in control."**

Two clear next steps: **"Plan my money, free"** and **"How it works"**.

Solution: Privacy is stated above the fold, so trust is earned before sign-up.

User Journey: on mobile

Produscope AI

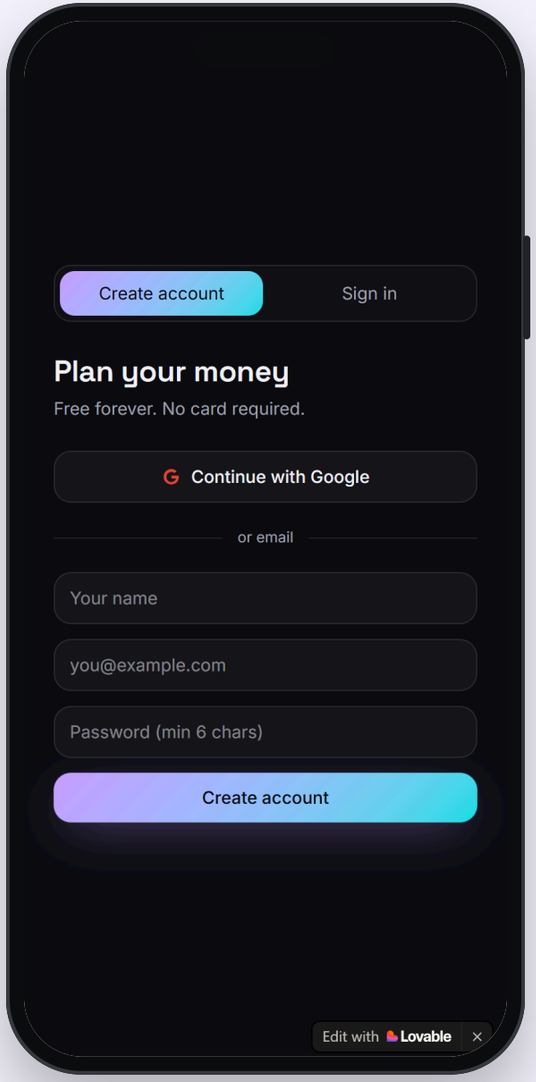

Feature cards

Cards explain the value in plain words: **Financial runway, Goals that move, Plan life events.**

Sign-up is light: Google or email, **"Free forever. No card required."**

The app sits behind sign-up, so Dashboard, Simulator and Goals screens are not shown here.

Solution: Proposed: a public demo with sample numbers so visitors can see the Simulator first.

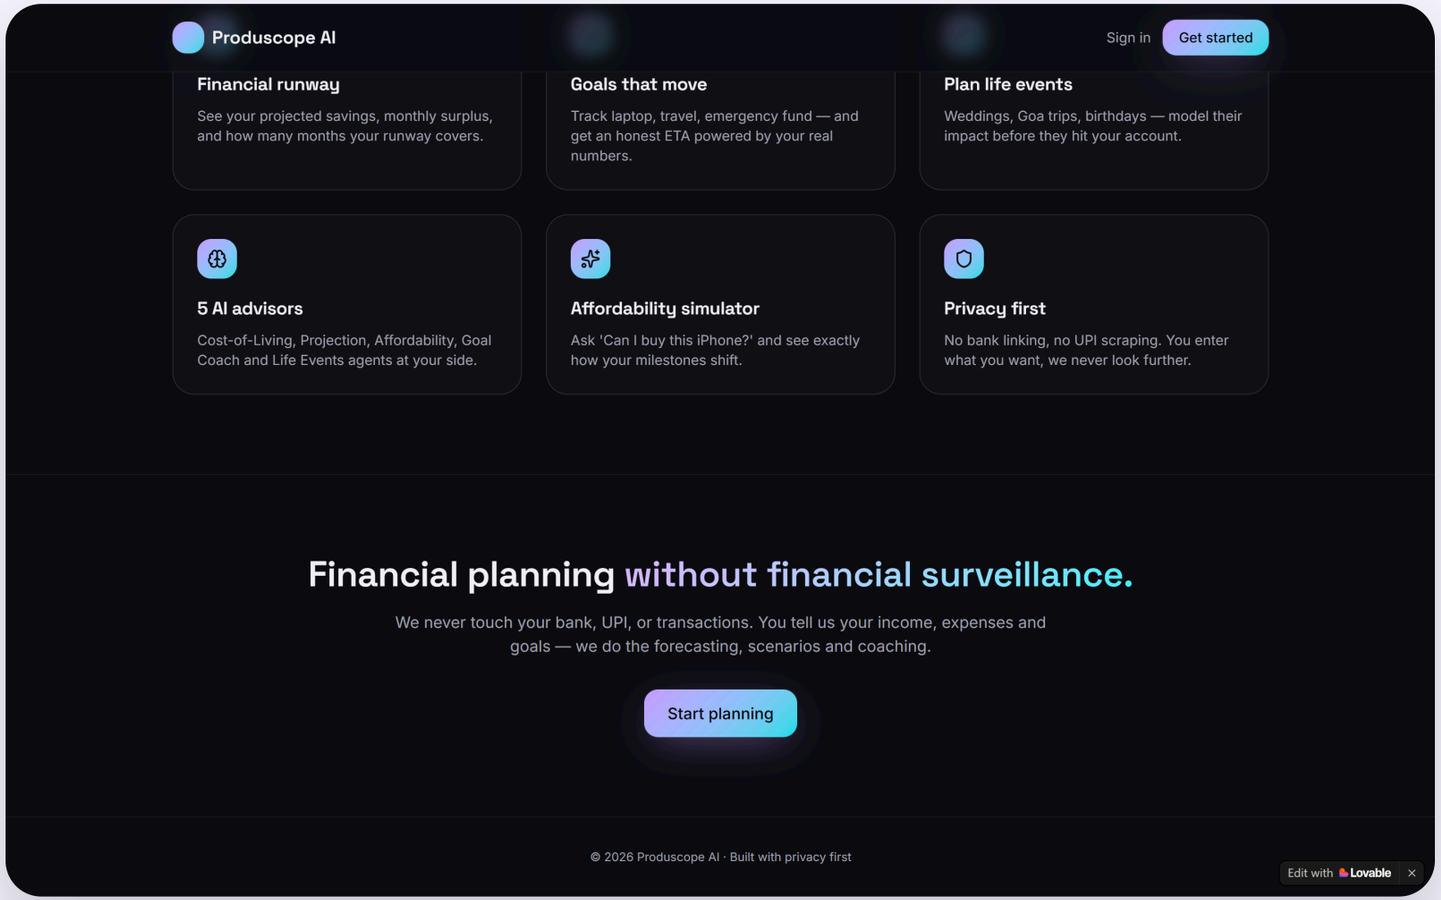

Sign-up

The pitch in one line

Produscope AI

The page closes on the thesis: financial planning without financial surveillance. You tell it income, expenses and goals; it does the forecasting, scenarios and coaching.

Five agents, one reconciler

Produscope AI

01
Cost-of-Living
What you already spend.

→

02
Projection
Savings, surplus and runway.

→

03
Affordability
What a purchase would cost you.

→

04
Goal Coach
What it delays.

→

05
Life Events
Weddings, trips, birthdays.

→

06
Coordinator
Reconciles the five outputs.

Each agent's job is small enough that its output can be checked independently. That is the reason the decomposition works.

Three surfaces

1

Dashboard

Where am I now. Savings, surplus and runway at a glance, the baseline for everything else.

2

Simulator

What if. "Can I afford an iPhone 16" returns a savings-after number, a plain yes or no, and the delay to an existing goal.

3

Goals Tracker

Am I on track. ETAs are computed against actual surplus; if the number moves, the date moves.

The deliberate constraint

Produscope AI

0

Bank links

Manual entry only, everywhere

5

Specialist agents

Plus one reconciler

Trade-off: less auto-categorisation and more manual upkeep, in exchange for a product that can say it has never seen your bank account.

Thank you for reading.
