PRD: QuickServe

Product: Rapido for salon and beauty services

Stage: MVP, live (Lovable)

North Star: Completed bookings per active user

Author: Godhuli Vyas

QuickServe's Overview

QuickServe

Salon and beauty services in India are largely **unstructured and offline.** Customers depend on phone calls and personal references; freelance beauticians face inconsistent demand and visibility. QuickServe applies the discovery-and-fulfilment structure Rapido used for bike taxis to **on-demand, at-home services.**

Two-sided marketplace | Consumers and providers | Web | Built on Lovable

Key Insights:

Customers want predictable pricing, flexible scheduling, trusted professionals and digital-first booking.

Providers have irregular demand and income, no central booking system and a limited digital presence.

One number decides success: completed bookings per active user.

Who it is for

QuickServe

B

Busy urban customer

Consumer

Wants **quick, reliable salon service at home.** Values time, pricing clarity and quality. Today struggles to find a reliable beautician at short notice, with no view of availability.

F

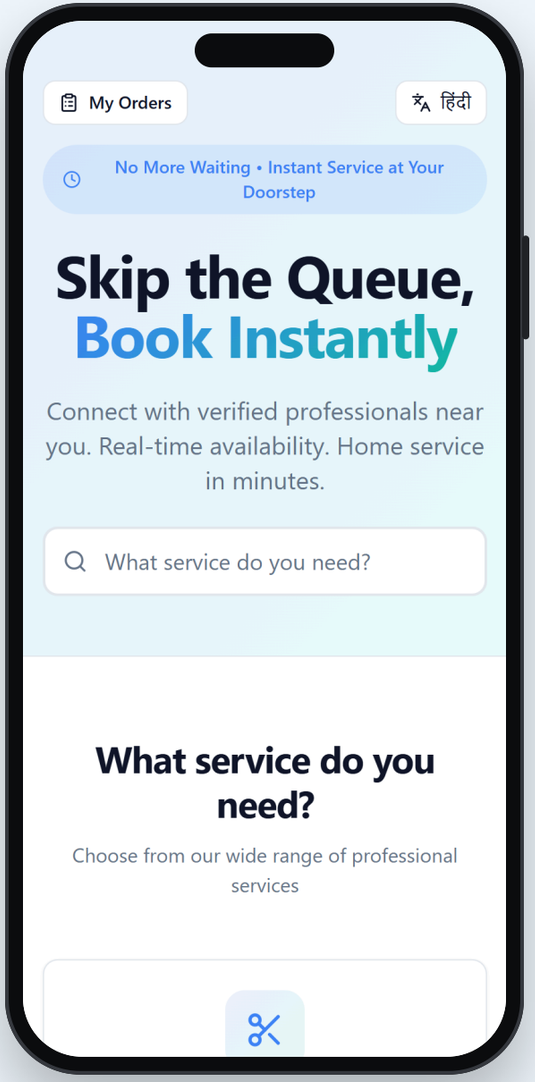

Freelance beautician or salon owner

Provider

The beautician wants **consistent bookings** and fair payouts. The salon owner wants **incremental online demand** and better staff utilisation. Both lack a central booking system.

Customer: the home screen

QuickServe

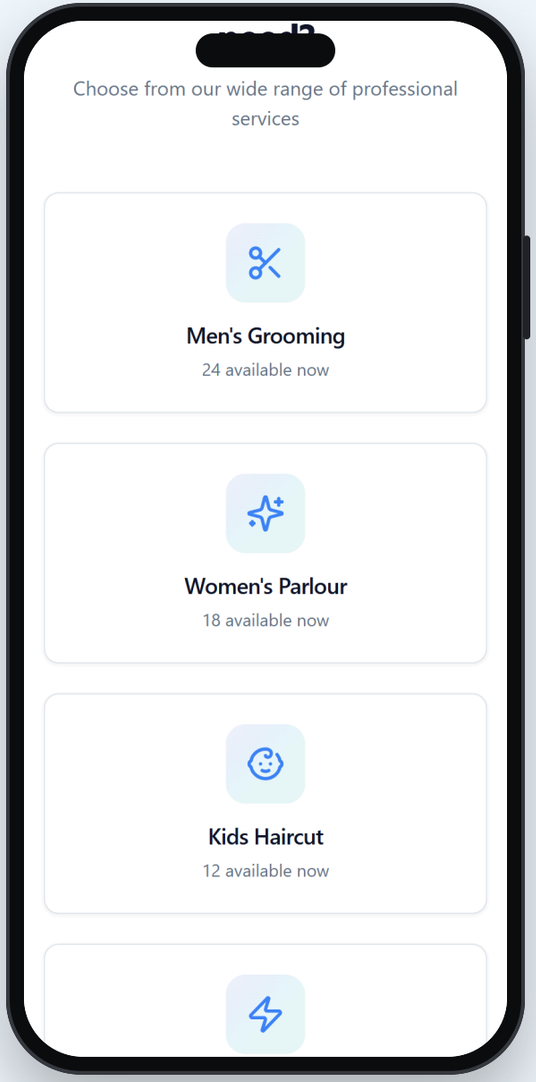

Home

The headline promises the product: **"Skip the Queue, Book Instantly"** with real-time availability and home service in minutes.

Each category shows a live count, such as **"24 available now"**, answering the availability question before the tap.

My Orders and a **Hindi language toggle** sit at the top, built for India from the first screen.

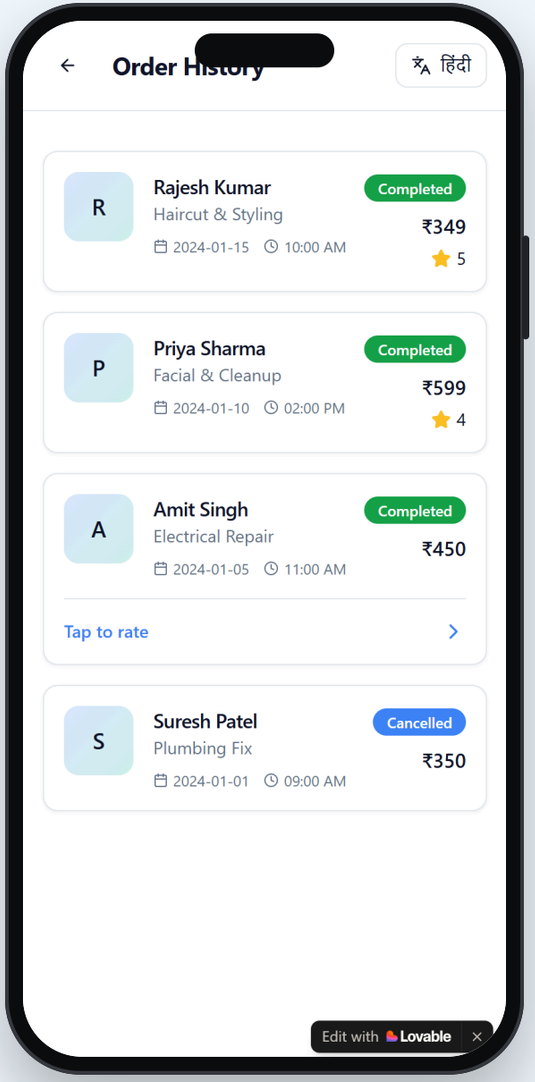

Solution: Proposed: show price and duration on each category card, as the PRD requires, to cut price ambiguity.

Service categories

Customer: order history

QuickServe

Order History

Orders show **service, date, time, price and status** (Completed, Cancelled) in one card.

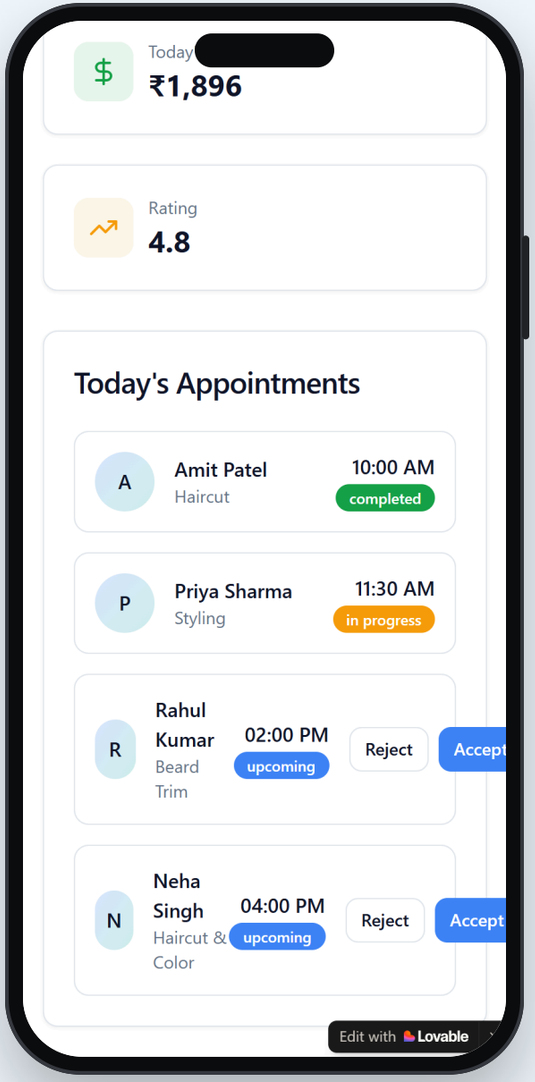

Completed orders carry a **star rating**; unrated ones show **"Tap to rate"**, the trust flywheel from the PRD.

The screen shows sample data, so it shows the design of the loop, not live volume.

Solution: Reviews feed provider quality, which feeds the ratings metric.

Provider: the dashboard

QuickServe

Provider dashboard

Entry is a **"Join as Professional"** button on the customer home screen: one app, two sides.

The dashboard shows **today's earnings and rating** at the top, the retention features the PRD lists.

Today's Appointments have status chips (completed, in progress, upcoming) and **Accept / Reject** actions. **Both buttons are cut off at phone width.**

Solution: Proposed: fix the card layout so both actions fit on small screens.

Core features (PRD)

QuickServe

1

Must have

- Service discovery: categories, price, duration, ratings
- Real-time availability and scheduling
- Booking and fulfilment with status tracking
- Payments: UPI, card, promo codes
- Ratings and reviews

2

Should have

- Provider dashboard: earnings, history, availability
- In-app chat and call, image sharing

3

MVP scope

- In: home service, Hair, Skin, Makeup, real-time availability, online payments, reviews
- Out for now: subscriptions, loyalty, AI recommendations, advanced analytics

Risks and decisions

QuickServe

Risk	Decision
Supply shortage	Start city-wise
Quality variance	Ratings plus verification
Cancellations	Clear penalties
Slow adoption	Intro offers

Goals and success metrics

QuickServe

1

North Star

Completed bookings per active user

6

Supporting metrics

Conversion, provider acceptance, fulfilment time, 30-day repeat, rating, providers onboarded
