Teardown: TimesPro

Product: Two-minute AI career check-in

Output: Future Career Card

Engine: Six factors, three scoring functions

Author: Godhuli Vyas

Visionary Corner's Overview

TimesPro

A **two-minute AI career check-in** that ends in a Future Career Card. Underneath is a small recommendation engine: **six weighted questions, one ranked list** of six courses. Built to run **live at an event,** not as a demo.

React | Vercel | Weighted scoring | Deterministic

Key Insights:

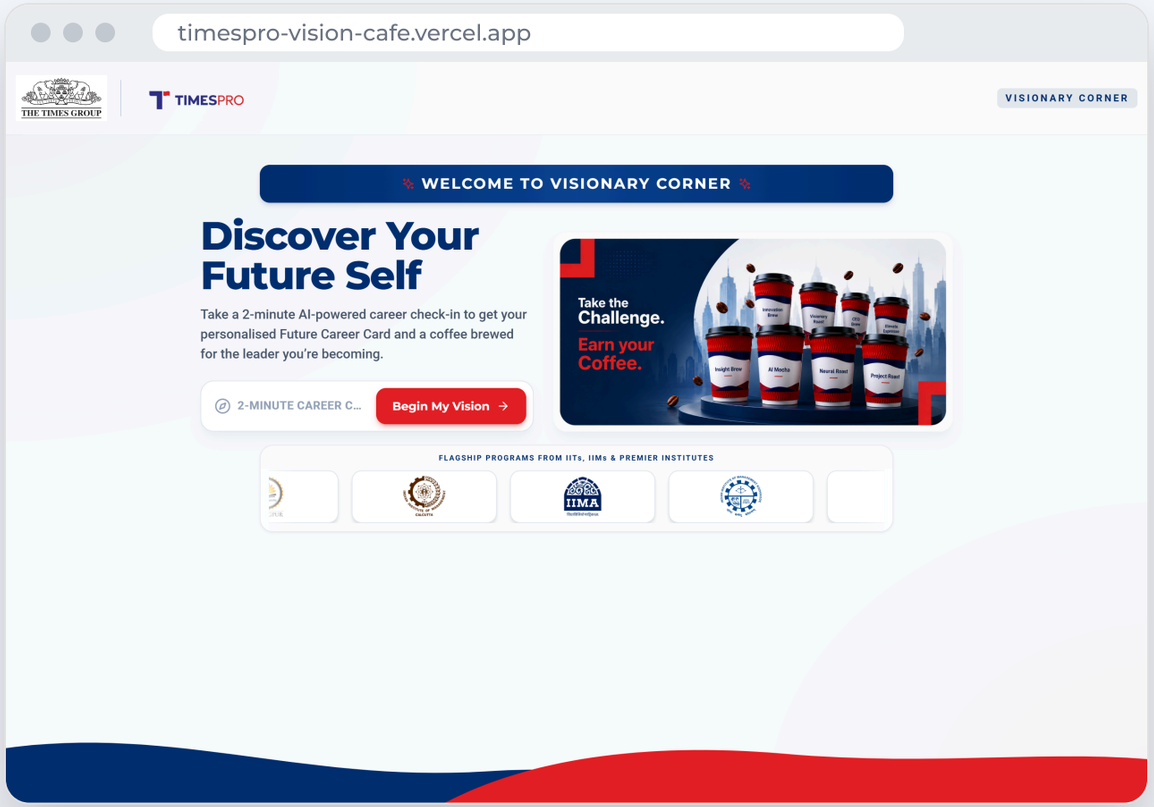

Not a filter: every course is scored on 6 factors, and the weights add up to exactly 100%.

Three scoring styles fit the shape of each factor, instead of one yes/no.

No LLM in the ranking, so the same answers always give the same result.

User Journey: the welcome screen

TimesPro

"Discover Your Future Self": the promise is a personalised Future Career Card and a coffee brewed for the leader you are becoming.

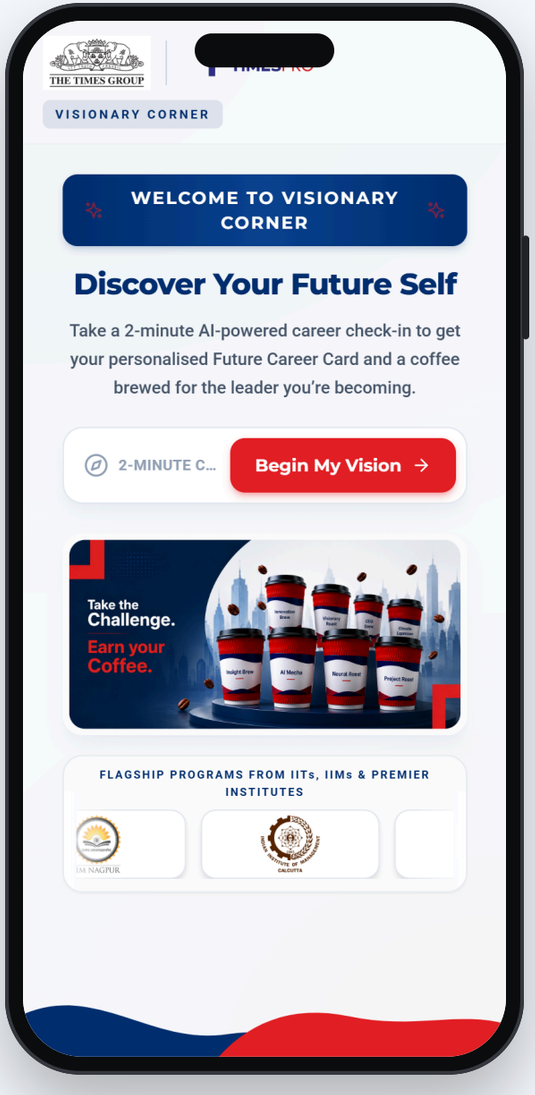

A single red action, **"Begin My Vision"**, starts the check-in.

Programme logos from IITs, IIMs and premier institutes sit underneath as proof.

Solution: One screen, one action: built for a visitor standing at a booth.

User Journey: reserve your spot

TimesPro

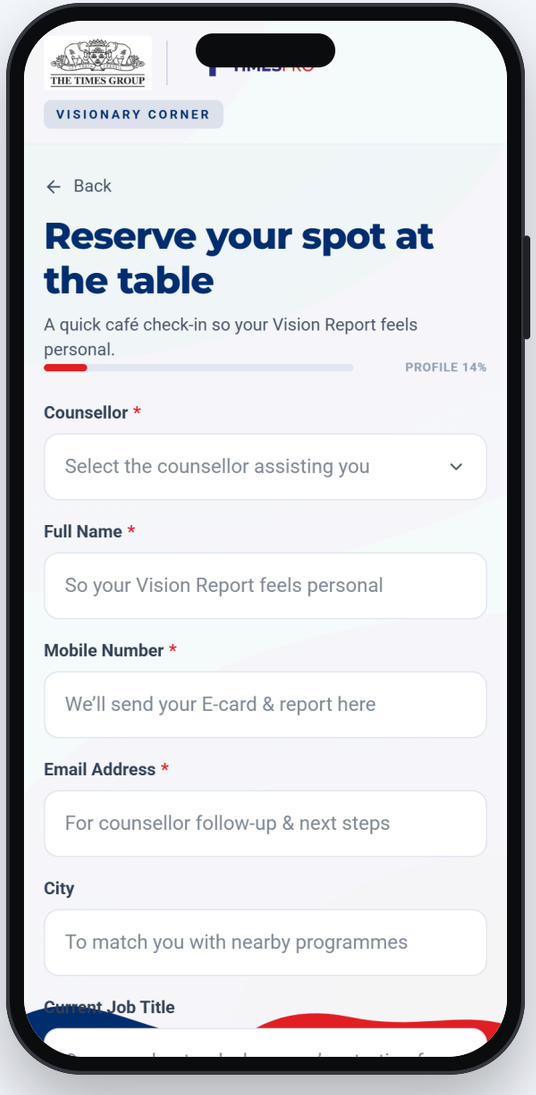

Welcome

The first step is **"Reserve your spot at the table"** with a progress bar (Profile 14%).

Fields: counsellor, name, mobile, email, city and job title, so the **report and E-card feel personal.**

Mobile number and email are required before any value is shown.

Solution: Proposed: show a sample Future Career Card before the form to lift completion.

Step 1

The model: six weighted factors

TimesPro

Factor	Weight
Skill you want to learn	25%
Career goal	20%
Experience level	15%
Learning format and investment readiness	15% each
Industry	10%

Three scoring functions

TimesPro

1

Exact match, soft miss

Industry, goal, skill, format. In the accepted list scores 100; otherwise a fixed penalty. Miss scores: skill 25, goal 35, industry 40, format 45.

2

Ordinal distance

Experience level. Exact band scores 100; each band off costs 30, with a floor of 20.

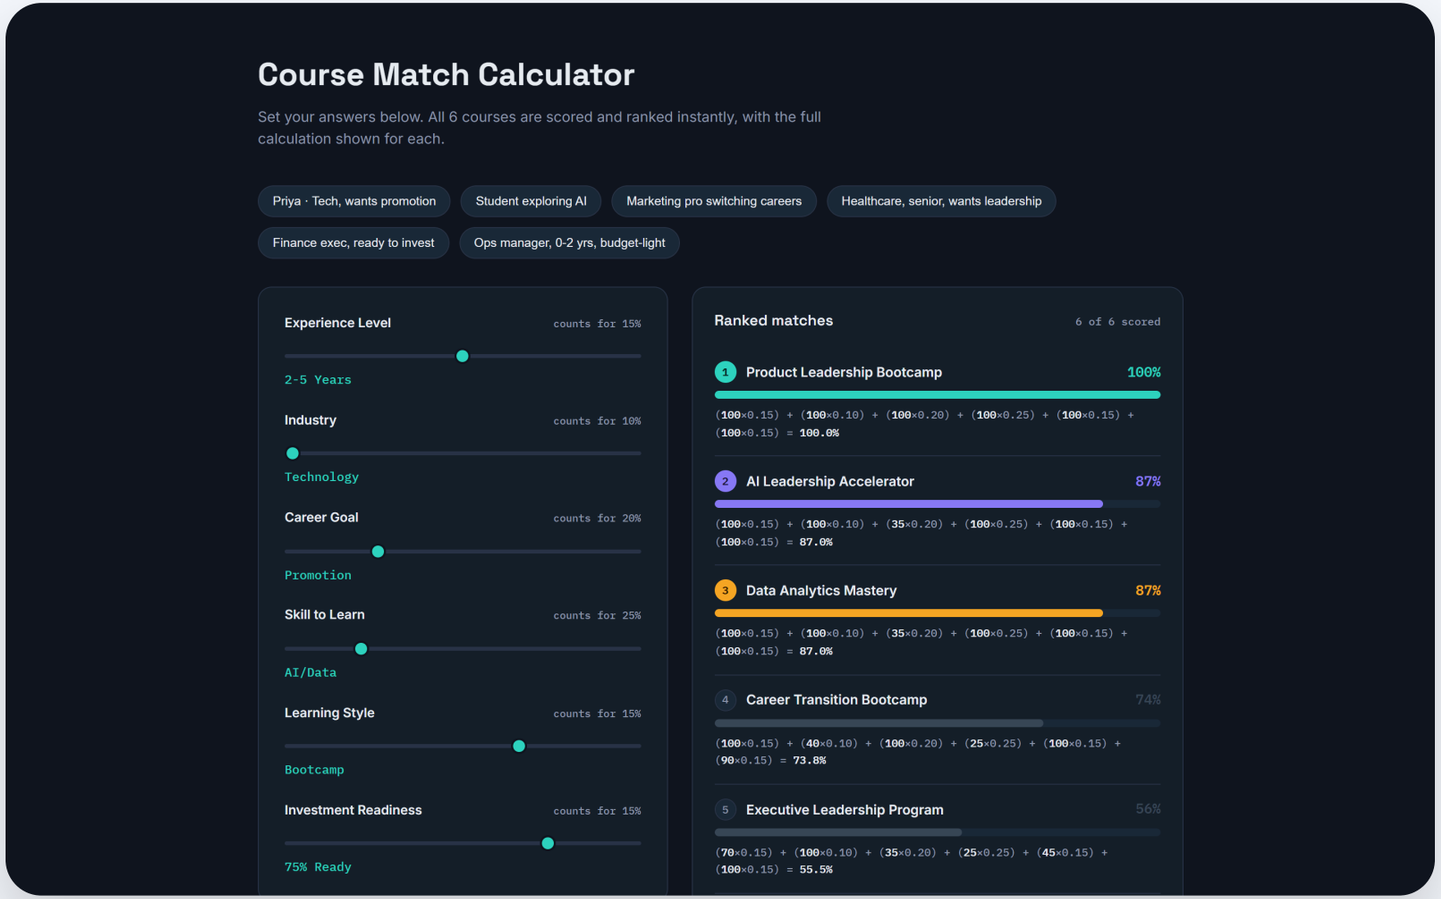

3

Range fit

Investment readiness. In range 100; below, a penalty by the gap (floor 20); above the range, 90.

The scoring calculator

My interactive calculator runs the same engine: set six answers and all six courses are ranked instantly, with the full sum shown for each.

Worked example

TimesPro

Rank	Course	Score
1	Product Leadership Bootcamp	100%
2	AI Leadership Accelerator	87%
3	Data Analytics Mastery	87%
4	Career Transition Bootcamp	74%
5	Executive Leadership Program	56%

Why this shape, not a smarter one

TimesPro

1

No brute force

The visitor has one profile. Scoring it against each course is courses times factors, not combinatorial.

2

No LLM call

Runs on a booth screen with a queue behind. A weighted sum is instant, and the same answers give the same ranking on a printed card.

3

Per-course ranges

Each course carries its own accepted ranges, so a beginner bootcamp and an executive programme are not scored by one curve.

Thank you for reading.
