PMM Assignment: zenskar

Company: Zenskar, billing and revenue platform

Task: Customer research, positioning and homepage messaging

Read: 6 minutes

Author: Godhuli Vyas

How I built the research agent

zenskar

01
Plan and code
Claude Code for planning and code. Brief: run locally, plain words, always cite, do not deploy.

→

02
Collect
Python collectors gather, clean and de-duplicate pages.

→

03
Search
fastembed and SQLite for local search.

→

04
Retrieve
LangChain for retrieval, memory and routing.

→

05
Answer
Ollama with Llama 3.2 1B writes answers, shown on a FastAPI and plain HTML page.

Key prompt: "Use ONLY the numbered sources. One sentence (max 20 words), then at most 3 bullets, each ending in its source [n]."

Method: people first, agent second

zenskar

55

customer quotes read by hand

5 were Zenskar staff and were excluded, leaving 50

500+

market documents checked

across 10 rivals, by the agent

7 of 20

test questions clearly right

so key customer answers are hand-written, with quotes

Automated: collecting and de-duplicating pages, sitemap counts, llms.txt and AI-crawler checks, citation checks. Not yet verified: the 2026 billing acquisitions and the "6 to 12 week" claim.

What customers say

zenskar

1

The problem

Billing changes depend on engineers and manual steps. "The entire process is highly manual." (Company D)

2

The job to be done

Let finance and ops change contracts and pricing themselves. Outcome wanted: "Mostly on my own." (Company C)

3

What triggers a search

A pricing change (B), one person owning all billing changes (C), a move from hardware to software (D).

4

Why Zenskar won

Flexibility, an easier setup than the first tool tried, and a responsive team (A, B, D).

Key insights (hypotheses), 1 to 4

zenskar

1

Manual work, not old tools

The old way was manual work and one engineer. Seen in B, C, D. First priority. Check: 3 more discovery calls.

2

Change triggers a buy

People buy at a pricing change, bottleneck or new model. Seen in B, C, D. First priority. Check: the trigger in the ~110 calls not yet read.

3

Finance runs billing

They want finance to run billing without an engineer. Seen in B, C. First priority. Check: 5 buyer calls on the new headline.

4

Team beats product

Team rated about 9, product 6 to 7. Seen in A, B, D. Next. Check: short survey of team vs product score.

Key insights (hypotheses), 5 to 7

zenskar

5

Nobody says AI

Two customers (B, D) use Claude on their own. Next. Check: sales calls and how MCP is used.

6

Risk of over-claiming

Gaps: revenue-recognition close, reports, on-demand revenue. Seen in B, D. Guardrail. Check: confirm status with product.

7

Go-live takes longer

Slower than the website suggests. Seen in A, B, C, D. Guardrail. Check: real go-live dates from customer success.

Positioning: today vs new

	Today	New
Against	Outdated tools	Manual work and waiting for engineering
For whom	Anyone with complex pricing	Finance and RevOps at a pricing change, model shift or key-person risk
Promise	Automates billing and revenue recognition for real-world complexity	Run pricing changes yourself, with no wait for engineering
AI	A jab at bolt-on AI	Agents do the busywork, you approve
Proof and tone	Capability claims; "You deserve better."	Partnership and flexibility; plain, specific words

The new positioning, in one sentence

zenskar

NEW POSITIONING

For finance and RevOps teams whose pricing keeps changing, Zenskar is the billing and revenue platform you run yourselves.

Change usage, credits and custom contracts without waiting for engineering. Agents do the busywork and you stay in control.

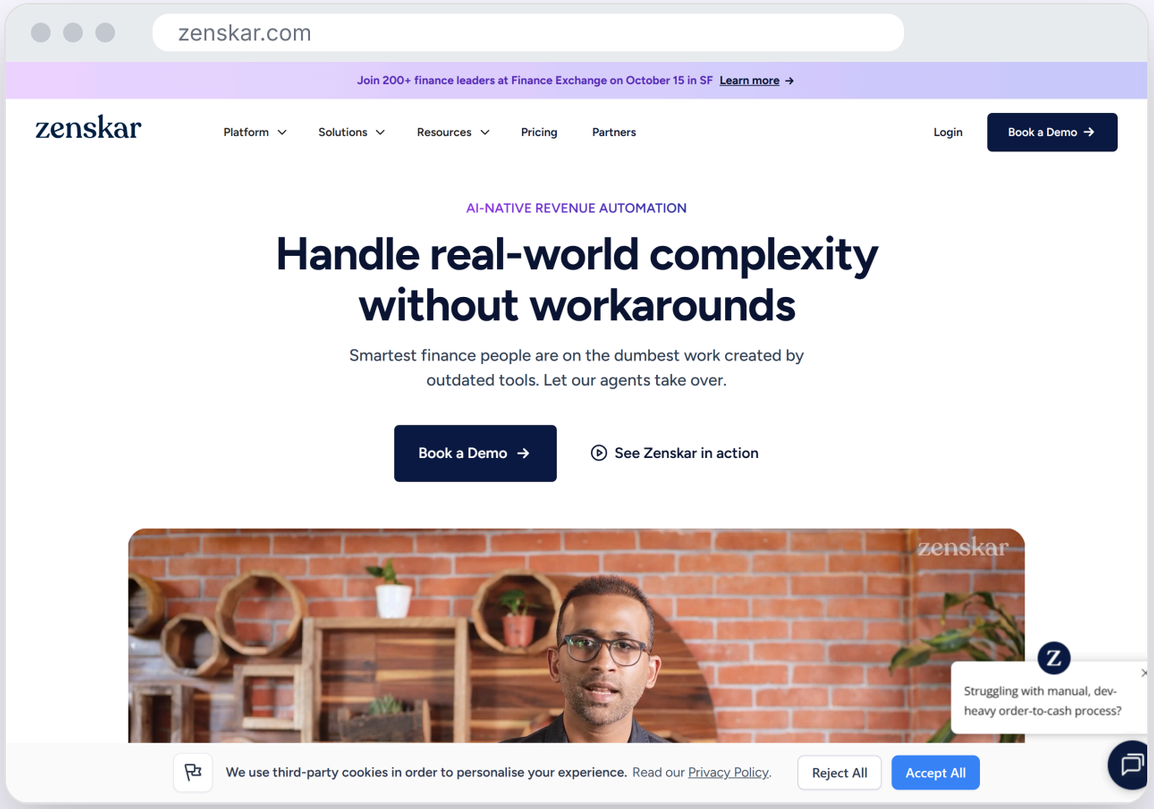

TODAY

"Outdated tools label this as edge cases... a Ferrari engine on a horse-drawn carriage... You deserve better."

SHIFT

From attacking old tools to naming the real enemy: manual work and the engineering queue.

Homepage today

Headline today: **"Handle real-world complexity without workarounds."**

Subline: "Smartest finance people are on the dumbest work created by outdated tools."

It speaks to tools, not to the finance team that is stuck waiting on engineers.

Proposed headline: "Change your pricing without filing an engineering ticket."

Solution: Proposed: lead with the job customers named, not the complexity.

Homepage copy changes (proposed)

zenskar

Part	Now	New
Headline	Handle real-world complexity without workarounds	Change your pricing without filing an engineering ticket.
Line under it	Smartest finance people are on the dumbest work...	Set it up and change it yourself. Agents handle the busywork. You approve.
New section	(none)	"Where teams start": four cards: changing pricing, one person owns billing, hardware or services to software, new controller or ERP
Rollout line	(none)	Start with subscriptions. Add usage, credits and revenue recognition when you're ready.
Proof / remove	Ferrari line, "You deserve better."	Approved customer quotes only, e.g. "I could do it mostly on my own" (Company C, needs approval first)

Do not claim until verified

"Zero-day close"

Revenue-recognition close is a possible gap (insight 6). Confirm status with product first.

"6 to 12 week" setup

Customers say going live takes longer than the site suggests (insight 7). Get real go-live dates first.

Competitor names

Needs a legal check before use.

The working agent: three real answers

Left: customer question with hand-checked quotes. Middle: exact chart of competitor page types. Right: all 11 homepage headlines side by side.

Thank you for reading.
